Firebase Database

# Firebase Firestore

- Cloud-based NoSQL database by Firebase to store and sync data.
- Data is stored in collections and documents.
- Use Firestore when your app needs structured, scalable data with complex queries and offline support.

Firebase Realtime

- Cloud-hosted NoSQL database that updates data in real-time across all clients.

- Data is stored in a JSON tree.

- Use Realtime Database when your app needs live data sync, like chat apps or live tracking.
